

BIPOLAR ANALOG INTEGRATED CIRCUIT

μ PC29M00 Series

THREE TERMINAL LOW DROPOUT VOLTAGE REGULATOR

The μ PC29M00 series of low dropout voltage three terminal positive regulators is constructed with PNP output transistor. The μ PC29M00 series feature the ability to source 0.5 A of output current with a low dropout voltage of typically 0.5 V.

The power dissipation of the μ PC29M00 series can be drastically reduced compared with the conventional three terminal positive voltage regulators that is constructed with NPN output transistor. Also, this series corresponds to the low voltage output (3 V, 3.3 V) which is not in the conventional low dropout regulators (μ PC24M00A series).

FEATURES

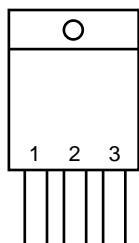

- Output current in excess of 0.5 A
- Low dropout voltage $V_{DIF} = 0.5$ V TYP. (at $I_o = 0.5$ A)
- On-chip overcurrent and thermal protection circuit
- On-chip output transistor safe area protection circuit

PIN CONFIGURATION (Marking Side)

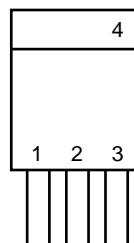

μ PC29M00HF Series: MP-45G

μ PC29M00HB Series: MP-3

μ PC29M00T Series: MP-3Z

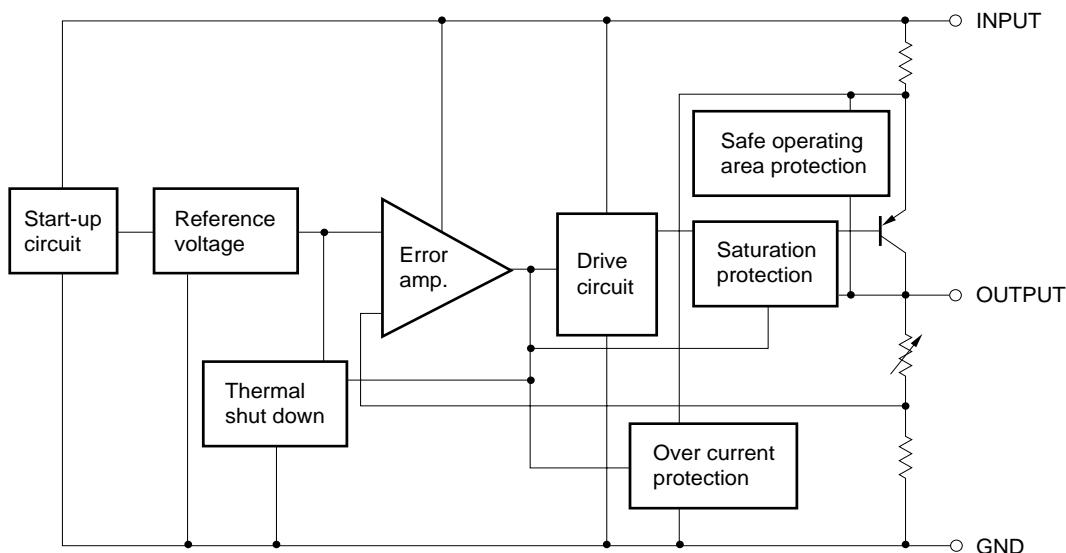

1: INPUT
2: GND
3: OUTPUT

1: INPUT
2: GND
3: OUTPUT
4: GND (Fin)

μ PC29M12HF	MP-45G (Isolated TO-220)	12.0 V
μ PC29M12HB	MP-3 (SC-64)	12.0 V
μ PC29M12T	MP-3Z (SC-63)	12.0 V

ABSOLUTE MAXIMUM RATINGS ($T_A = 25^\circ\text{C}$, Unless otherwise specified.)

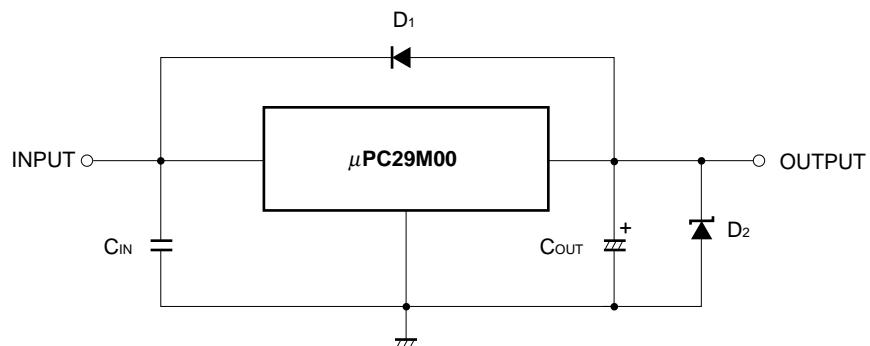

Parameter	Symbol	Rating		Unit
		μ PC29M00HF	μ PC29M00HB, μ PC29M00T	
Input Voltage	V_{IN}	20		V
Internal Power Dissipation ^{Note}	P_T	15	10	W
Operating Ambient Temperature	T_A	−30 to +85		°C
Operating Junction Temperature	T_J	−30 to +150		°C
Storage Temperature	T_{stg}	−55 to +150		°C
Thermal Resistance (Junction to Case)	$R_{th(J-C)}$	7	12.5	°C/W
Thermal Resistance (Junction to Ambient)	$R_{th(J-A)}$	65	125	°C/W

Note $T_c = 25^\circ\text{C}$, Internally limited

When operating junction temperature rises up to 150°C , the internal circuit shutdown output voltage.

Caution Exposure to Absolute Maximum Ratings for extended periods may affect device reliability; exceeding the ratings could cause permanent damage. The parameters apply independently. The device should be operated within the limits specified under DC and AC Characteristics.

TYPICAL CONNECTION

- C_{IN} : More than $0.1 \mu\text{F}$. Required if regulator is located an appreciable distance from power supply filter. You must use to prevent from the parasitic oscillation.
- C_{OUT} : More than $47 \mu\text{F}$. You must use the Low-impedance-type (low ESR) capacitor.
- D_1 : Need for $V_o > V_{IN}$
- D_2 : Need a shottky barrier diode for $V_o < GND$.

TYPICAL CHARACTERISTICS

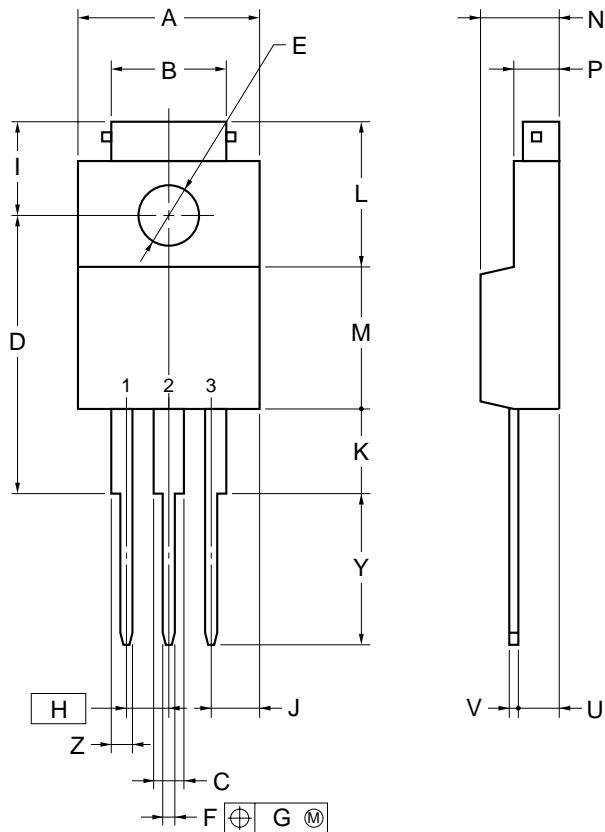

PACKAGE DRAWINGS

 μ PD29M00HF Series

3PIN PLASTIC SIP (MP-45G)

NOTE

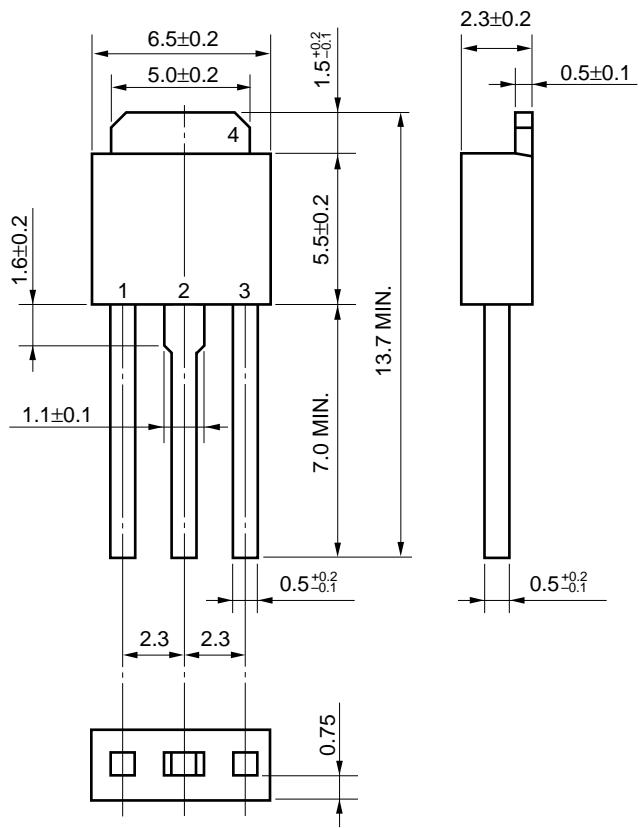

Each lead centerline is located within 0.25 mm of its true position (T.P.) at maximum material condition.

ITEM	MILLIMETERS
A	10.0±0.2
B	7.0±0.2
C	1.50±0.2
D	17.0±0.3
E	$\phi 3.3\pm 0.2$
F	0.75±0.10
G	0.25
H	2.54 (T.P.)
I	5.0±0.3
J	2.46±0.2
K	5.0±0.2
L	8.5±0.2
M	8.5±0.2
N	4.5±0.2
P	2.8±0.2

μ PC29M00HB Series

MP-3 (SC-64) (Unit: mm)

 μ PC29M00T Series

MP-3Z (SC-63) (Unit: mm)

RECOMMENDED SOLDERING CONDITIONS

When soldering this product, it is highly recommended to observe the conditions as shown below. If other soldering processes are used, or if the soldering is performed under different condition, please make sure to consult with our sales offices.

For more details, refer to our document “**SEMICONDUCTOR DEVICE MOUNTING TECHNOLOGY MANUAL**” (**C10535E**).

Surface mount devices

μ PC29M00T Series: MP-3Z

Process	Conditions	Symbol
Infrared ray reflow	Peak temperature: 235 °C or below (Package surface temperature), Reflow time: 30 seconds or less (at 210 °C or higher), Maximum number of reflow processes: 2 times.	IR35-00-2
VPS	Peak temperature: 215 °C or below (Package surface temperature), Reflow time: 40 seconds or less (at 200 °C or higher), Maximum number of reflow processes: 2 times.	VP15-00-2
Wave soldering	Solder temperature: 260 °C or below, Flow time: 10 seconds or less, Maximum number of flow processes: 1 time, Pre-heating temperature: 120 °C or below (Package surface temperature).	WS60-00-1
Partial heating method	Pin temperature: 300 °C or below, Heat time: 3 seconds or less (Per each side of the device).	—

Caution Apply only one kind of soldering condition to a device, except for “partial heating method”, or the device will be damaged by heat stress.

Through-hole devices

μ PC29M00HF Series: MP-45G

μ PC29M00HB Series: MP-3

Process	Conditions
Wave soldering (only to leads)	Solder temperature: 260 °C or below, Flow time: 10 seconds or less.
Partial heating method	Pin temperature: 300 °C or below, Heat time: 3 seconds or less (Per each pin).

Caution For through-hole device, the wave soldering process must be applied only to leads, and make sure that the package body does not get jet soldered.

CAUTION ON USE

When using the μ PC29M00 series at the input voltage which is lower than in the recommended operating condition, the big quiescent current flows through devices because the transistor of the output paragraph is saturated (Refer to I_{BIAS} ($I_{BIAS(s)}$) vs V_{IN} curves in **TYPICAL CHARACTERISTICS**). The μ PC29M00 series have saturation protection circuits, but they sometimes need about 80 mA current. Therefore the power supply on the input needs the enough current capacity to pass this quiescent current when the devices startup.

No part of this document may be copied or reproduced in any form or by any means without the prior written consent of NEC Corporation. NEC Corporation assumes no responsibility for any errors which may appear in this document.

NEC Corporation does not assume any liability for infringement of patents, copyrights or other intellectual property rights of third parties by or arising from use of a device described herein or any other liability arising from use of such device. No license, either express, implied or otherwise, is granted under any patents, copyrights or other intellectual property rights of NEC Corporation or others.

While NEC Corporation has been making continuous effort to enhance the reliability of its semiconductor devices, the possibility of defects cannot be eliminated entirely. To minimize risks of damage or injury to persons or property arising from a defect in an NEC semiconductor device, customers must incorporate sufficient safety measures in its design, such as redundancy, fire-containment, and anti-failure features.

NEC devices are classified into the following three quality grades:

"Standard", "Special", and "Specific". The Specific quality grade applies only to devices developed based on a customer designated "quality assurance program" for a specific application. The recommended applications of a device depend on its quality grade, as indicated below. Customers must check the quality grade of each device before using it in a particular application.

Standard: Computers, office equipment, communications equipment, test and measurement equipment, audio and visual equipment, home electronic appliances, machine tools, personal electronic equipment and industrial robots

Special: Transportation equipment (automobiles, trains, ships, etc.), traffic control systems, anti-disaster systems, anti-crime systems, safety equipment and medical equipment (not specifically designed for life support)

Specific: Aircrafts, aerospace equipment, submersible repeaters, nuclear reactor control systems, life support systems or medical equipment for life support, etc.

The quality grade of NEC devices is "Standard" unless otherwise specified in NEC's Data Sheets or Data Books. If customers intend to use NEC devices for applications other than those specified for Standard quality grade, they should contact an NEC sales representative in advance.

Anti-radioactive design is not implemented in this product.
