

# **Current Mode PWM Controller**

### **FEATURES**

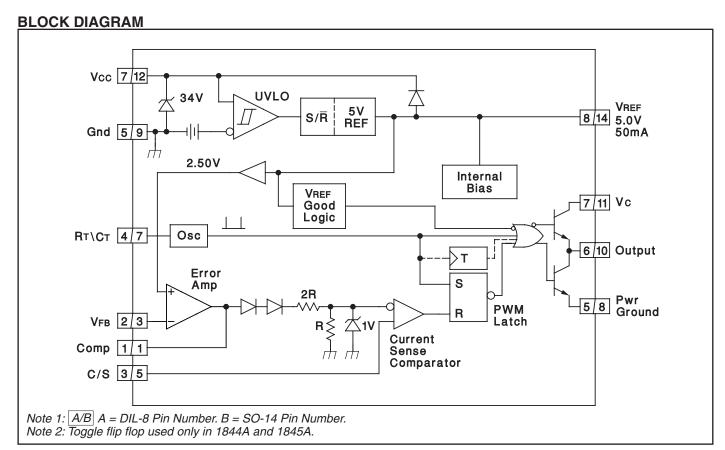

- Optimized for Off-line and DC to DC Converters
- Low Start Up Current (<0.5mA)</li>
- Trimmed Oscillator Discharge Current
- Automatic Feed Forward Compensation
- Pulse-by-Pulse Current Limiting
- Enhanced Load Response Characteristics
- Under-Voltage Lockout With Hysteresis
- Double Pulse Suppression
- High Current Totem Pole Output
- Internally Trimmed Bandgap Reference
- 500kHz Operation
- Low Ro Error Amp

### **DESCRIPTION**

The UC1842A/3A/4A/5A family of control ICs is a pin for pin compatible improved version of the UC3842/3/4/5 family. Providing the necessary features to control current mode switched mode power supplies, this family has the following improved features. Start up current is guaranteed to be less than 0.5mA. Oscillator discharge is trimmed to 8.3mA. During under voltage lockout, the output stage can sink at least 10mA at less than 1.2V for Vcc over 5V.

The difference between members of this family are shown in the table below.

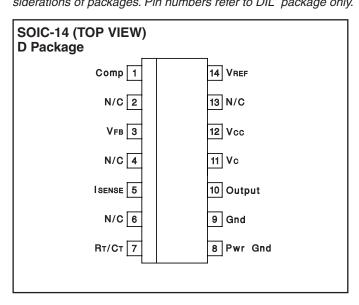

Part #	UVLO On	UVLO Off	Maximum Duty Cycle
UC1842A	16.0V	10.0V	<100%
UC1843A	8.5V	7.9V	<100%
UC1844A	16.0V	10.0V	<50%
UC1845A	8.5V	7.9V	<50%

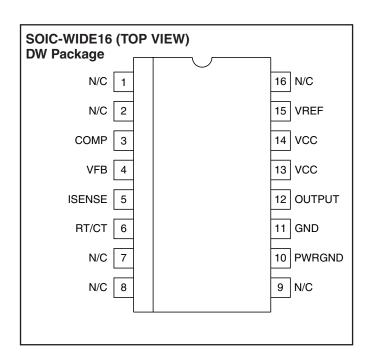

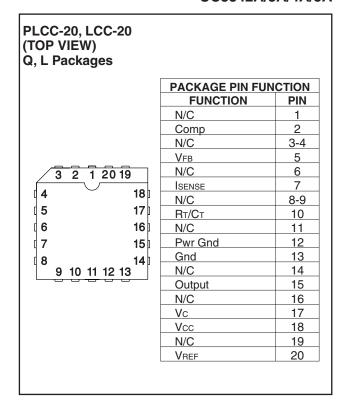

## **CONNECTION DIAGRAMS**

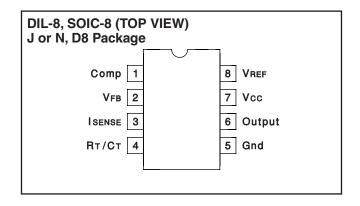

# **ABSOLUTE MAXIMUM RATINGS** (Note 1)

Supply Voltage (Low Impedance Source) 30V
Supply Voltage (Icc mA) Self Limiting
Output Current±1A
Output Energy (Capacitive Load)5µJ
Analog Inputs (Pins 2, 3)0.3V to +6.3V
Error Amp Output Sink Current
Power Dissipation at Ta $\leq$ 25°C (DIL-8)
Storage Temperature Range65°C to +150°C
Lead Temperature (Soldering, 10 Seconds) 300°C
Note 1. All voltages are with respect to Ground, Pin 5. Currents
are positive into, negative out of the specified terminal. Consult
Packaging Section of Databook for thermal limitations and con-
siderations of packages. Pin numbers refer to DIL package only

**ELECTRICAL CHARACTERISTICS** Unless otherwise stated, these specifications apply for  $-55^{\circ}\text{C} \le \text{Ta} \le 125^{\circ}\text{C}$  for the UC184xA;  $-40^{\circ}\text{C} \le \text{Ta} \le 85^{\circ}\text{C}$  for the UC284xA;  $0 \le \text{Ta} \le 70^{\circ}\text{C}$  for the UC384xA; Vcc = 15V (Note 5); RT = 10k; CT = 3.3nF; Ta = TJ; Pin numbers refer to DIL-8.

DADAMETED	TEST CONDITIONS	UC184xA\UC284xA			UC384xA			UNITS
PARAMETER		MIN.	TYP.	MAX.	MIN.	TYP.	MAX.	UNITS
Reference Section								
Output Voltage	$T_J = 25^{\circ}C$ , $I_O = 1mA$	4.95	5.00	5.05	4.90	5.00	5.10	V

PWM Section								
Maximum Duty Cycle	x842A/3A	94	96	100	94	96	100	%
	x844A/5A	47	48	50	47	48	50	%
Minimum Duty Cycle				0			0	%
Total Standby Current								
Start-Up Current			0.3	0.5		0.3	0.5	mA
Operating Supply Current	VPIN 2 = VPIN 3 = 0V		11	17		11	17	mA
Vcc Zener Voltage	Icc = 25mA	30	34		30	34		V

Note 2: Ensured by design, but not 100% production tested.

**Note 3:** Parameter measured at trip point of latch with VPIN2 = 0. **Note 4:** Gain defined as:  $A = \frac{\Delta VPIN \ 1}{\Delta VPIN \ 3}$ ;  $0 \le VPIN \ 3 \le 0.8V$ .

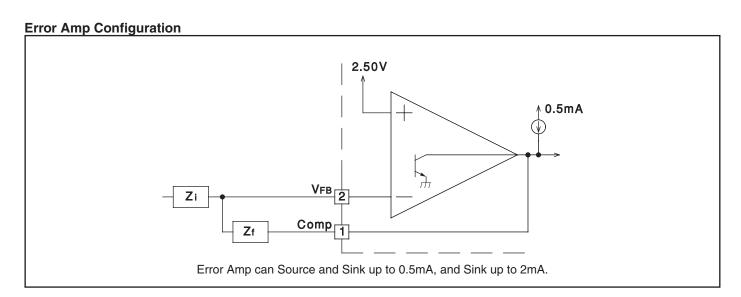

Note 5: Adjust Vcc above the start threshold before setting at 15V.

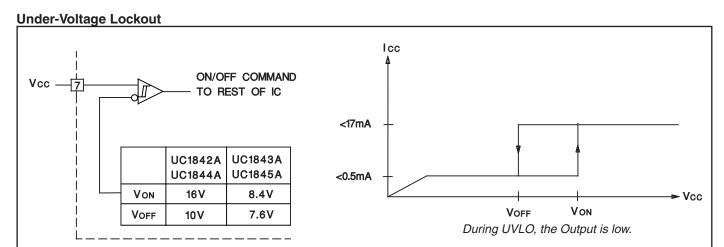

Note 6: Output frequency equals oscillator frequency for the UC1842A and UC1843A. Output frequency is one half oscillator frequency for the UC1844A and UC1845A.

Note 7: "Temperature stability, sometimes referred to as average temperature coefficient, is described by the equation:  $Temp Stability = \frac{VREF (max) - VREF (min)}{TL(min)}.VREF (max) \text{ and } VREF (min) \text{ are the maximum \& minimum reference volt-}$ TJ(max) - TJ(min)

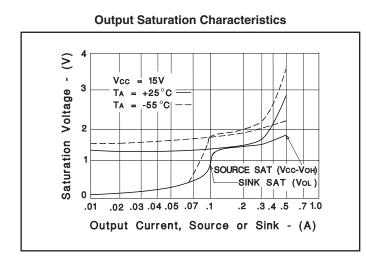

age measured over the appropriate temperature range. Note that the extremes in voltage do not necessarily occur at the extremes in temperature."

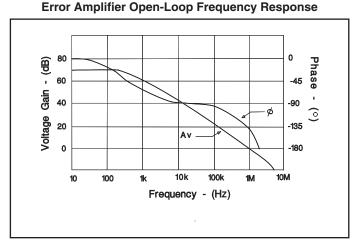

**Note 8:** This parameter is measured with  $RT = 10k\Omega$  to VREF. This contributes approximately 300  $\mu$ A of current to the measurement. The total current flowing into the RT/C pin will be approximately 300µA higher than the measured value.

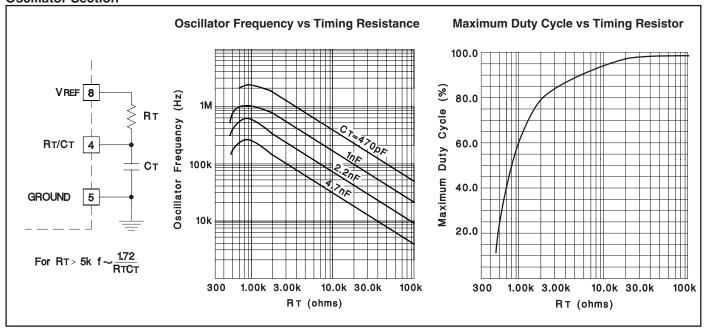

# Peak Current (Is) is Determined By The Formula ISMAX / 1.0V RS A small RC filter may be required to suppress switch transients.
