

MONOLITHIC DUAL H BRIDGE DRIVER CIRCUIT
DESCRIPTION

The μ PD16818 is a monolithic dual H bridge driver IC which uses N-channel power MOS FETs in its output stage. By employing the power MOS FETs for the output stage, this driver circuit has a substantially improved saturation voltage and power consumption as compared with conventional driver circuits that use bipolar transistors.

In addition, the drive current can be adjusted by an external resistor in power-saving mode.

The μ PD16818 is therefore ideal as the driver circuit of a 2-phase excitation, bipolar-driven stepping motor for the head actuator of an FDD.

FEATURES

- Compatible with 3V-/5V- supply voltage
- Pin compatible with μ PD16803
- Low ON resistance (sum of ON resistors of top and bottom MOS FETs)
 - $R_{ON1} = 1.2 \Omega$ ($V_M = 3.0$ V)
 - $R_{ON2} = 1.0 \Omega$ ($V_M = 5.0$ V)
- Low current consumption: $I_{DD} = 0.4$ mA TYP. ($V_{DD} = 2.7$ V to 3.6 V)
- Stop mode function that turns OFF all output MOS FETs
- Drive current can be set in power-saving mode (set by external resistor)
- Compact surface mount package

ORDERING INFORMATION

| Part Number | Package |
|---------------------|-------------------------------|
| μ PD16818GS | 20-pin plastic SOP (300 mil) |
| μ PD16818GR-8JG | 20-pin plastic SSOP (225 mil) |

ABSOLUTE MAXIMUM RATINGS ($T_A = 25$ °C)

| Parameter | | Symbol | Condition | Rating | Unit |

BLOCK DIAGRAM

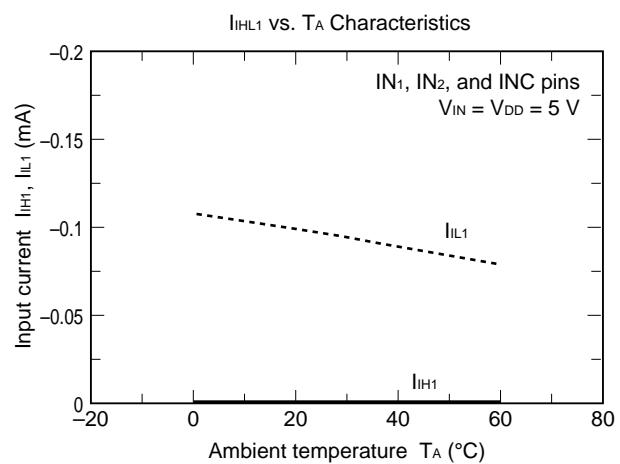

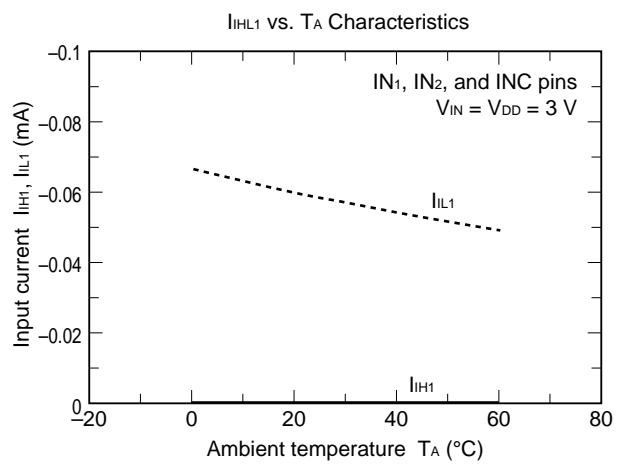

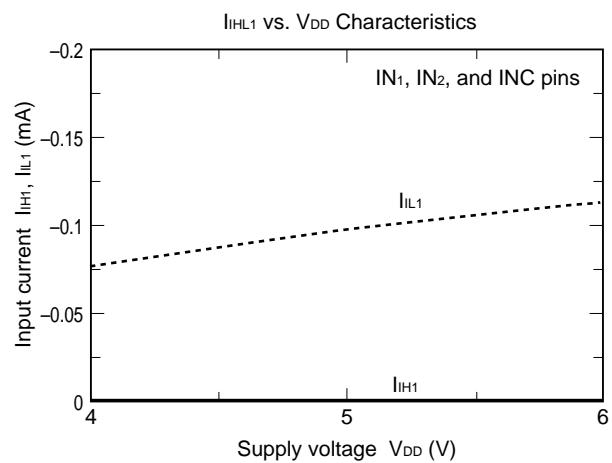

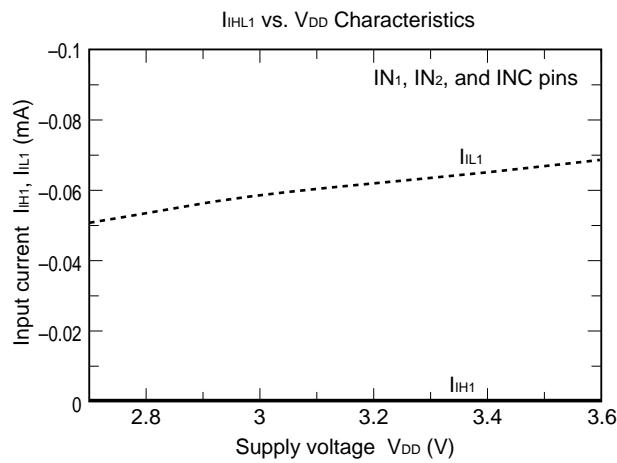

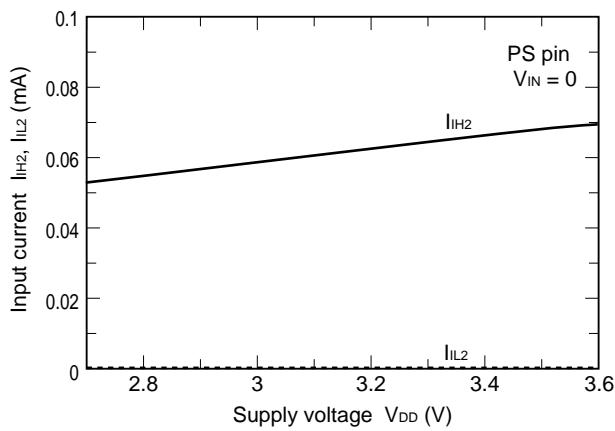

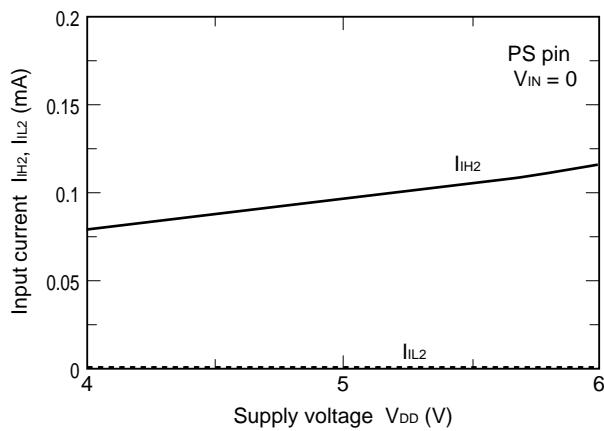

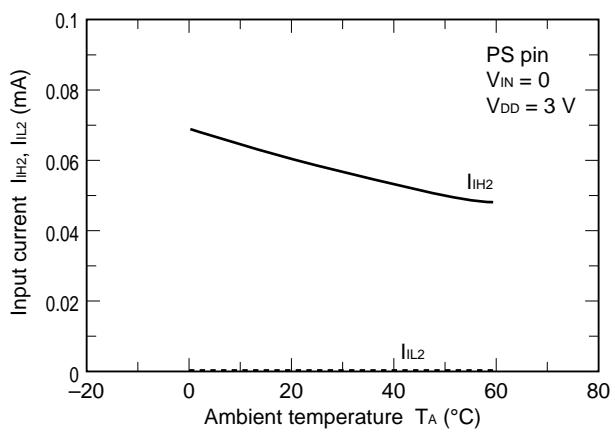

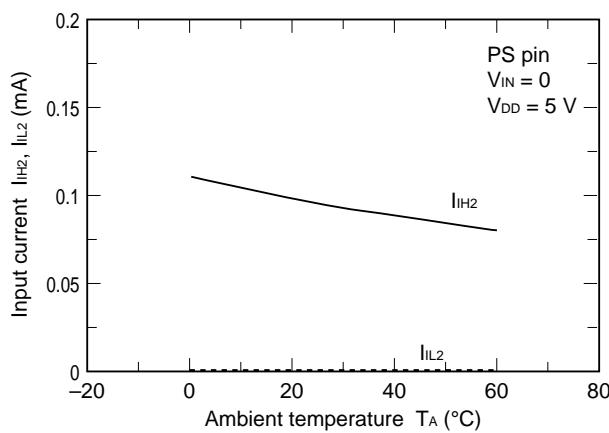

Note The power-saving mode is set when the PS pin goes high. In this mode, the voltage of the charge pump circuit is lowered and the ON resistance of the H bridge driver transistor increases, limiting the current.

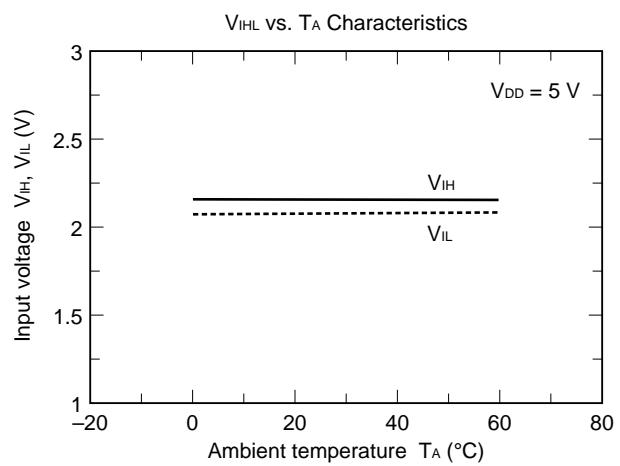

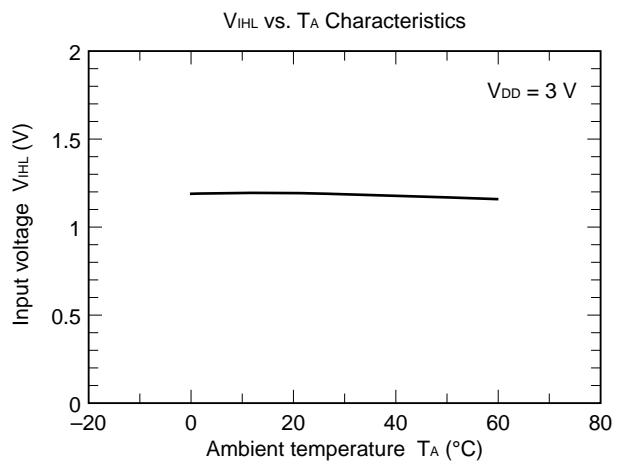

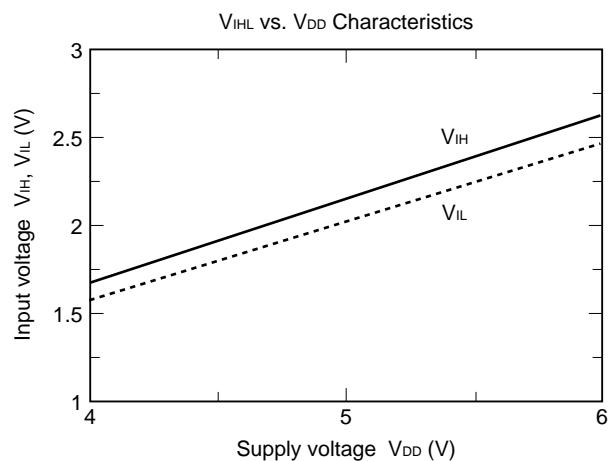

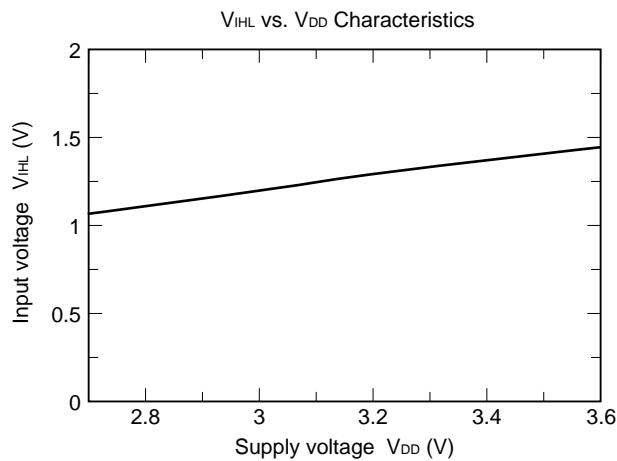

Remark ----- is connected in diffusion layer.

RECOMMENDED SOLDERING CONDITIONS

Solder this product under the following recommended conditions.

For details of the recommended soldering conditions, refer to information document **Semiconductor Device Mounting Technology Manual (C10535E)**.

Surface Mount Type

μ PD16818GS 20-pin plastic SOP (300 mil)
 μ PD16818GR-8JG 20-pin plastic SSOP (225 mil)

| Soldering Method | Soldering Conditions | Symbol of Recommended Soldering |
|------------------|--|---------------------------------|
| Infrared reflow | Package peak temperature: 235°C, Time: 30 seconds MAX.(210°C MIN.), Number of times: 3 MAX., Number of days: None ^{Note} , Flux: Rosin-based flux with little chlorine component (chlorine: 0.2 Wt% MAX.) | IR35-00-3 |
| VPS | Package peak temperature: 215°C, Time: 40 seconds MAX.(200°C MIN.), Number of times: 3 MAX., Number of days: None ^{Note} , Flux: Rosin-based flux with little chlorine component (chlorine: 0.2 Wt% MAX.) | VP15-00-3 |
| Wave soldering | Package peak temperature: 260°C, Time: 10 seconds MAX., Preheating temperature: 120 °C MAX., Number of times: 1, Flux: Rosin-based flux with little chlorine component (chlorine: 0.2 Wt% MAX.) | WS60-00-1 |

Note Number of days in storage after the dry pack has been opened. The storage conditions are at 25 °C, 65 % RH MAX.

Caution Do not use two or more soldering methods in combination.

No part of this document may be copied or reproduced in any form or by any means without the prior written consent of NEC Corporation. NEC Corporation assumes no responsibility for any errors which may appear in this document.

NEC Corporation does not assume any liability for infringement of patents, copyrights or other intellectual property rights of third parties by or arising from use of a device described herein or any other liability arising from use of such device. No license, either express, implied or otherwise, is granted under any patents, copyrights or other intellectual property rights of NEC Corporation or others.

While NEC Corporation has been making continuous effort to enhance the reliability of its semiconductor devices, the possibility of defects cannot be eliminated entirely. To minimize risks of damage or injury to persons or property arising from a defect in an NEC semiconductor device, customers must incorporate sufficient safety measures in its design, such as redundancy, fire-containment, and anti-failure features.

NEC devices are classified into the following three quality grades:

"Standard", "Special", and "Specific". The Specific quality grade applies only to devices developed based on a customer designated "quality assurance program" for a specific application. The recommended applications of a device depend on its quality grade, as indicated below. Customers must check the quality grade of each device before using it in a particular application.

Standard: Computers, office equipment, communications equipment, test and measurement equipment, audio and visual equipment, home electronic appliances, machine tools, personal electronic equipment and industrial robots

Special: Transportation equipment (automobiles, trains, ships, etc.), traffic control systems, anti-disaster systems, anti-crime systems, safety equipment and medical equipment (not specifically designed for life support)

Specific: Aircrafts, aerospace equipment, submersible repeaters, nuclear reactor control systems, life support systems or medical equipment for life support, etc.

The quality grade of NEC devices is "Standard" unless otherwise specified in NEC's Data Sheets or Data Books. If customers intend to use NEC devices for applications other than those specified for Standard quality grade, they should contact an NEC sales representative in advance.

Anti-radioactive design is not implemented in this product.
