

Transmissive Optoswitch

Slotted Switch — 0.425 High

VTL23DxA Series

PRODUCT DESCRIPTION

This series of interrupter type transmissive optoswitches combines an infrared emitting diode (IRED) with an NPN phototransistor in an opaque plastic case with two mounting tabs. Visible light blocking dust covers are provided over the .04" (1.0 mm) wide molded-in apertures. Smaller width external aperture covers are available to increase position sensing resolution. These devices are furnished with P.C.board mount leads.

ABSOLUTE MAXIMUM RATINGS

Notes:

1. The dark current is measured with the part totally shielded from ambient light.
2. Contains a visible light blocking dust cover over the apertures.
3. The plastic case can be damaged by chlorinated hydrocarbons and ketones. Methanol isopropanol alcohols are recommended as cleaning agents.
4. VTL23D1A22 accommodates most applications. The other parts in this series are available only for specialized, high volume applications.
