■ GENERAL DESCRIPTION

The XC6213 series are highly precise, low noise, positive voltage LDO regulators manufactured using CMOS processes. The series achieves high ripple rejection and low dropout and consists of a voltage reference, an error amplifier, a current limiter and a phase compensation circuit plus a driver transistor.

Output voltage is selectable in 100mV increments within a range of 2.2V ~ 5.0V.

The series is also compatible with low ESR ceramic capacitors, which give added output stability.

The current limiter's foldback circuit also operates as a short protect for the output current limiter and the output pin.

The CE function enables the output to be turned off, resulting in greatly reduced power consumption.

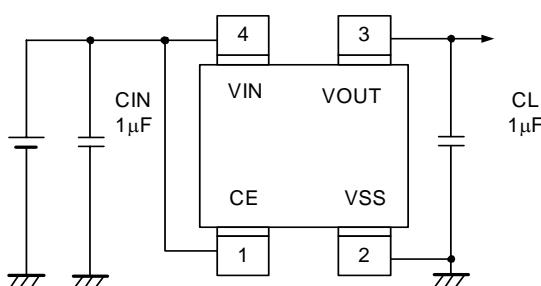

Ultra small package, SSOT-24 and SOT-25, are available.

Note:

(NOTE1) VOUT(E) = Effective Output Voltage

(i.e. the output voltage when "VOUT(T) + 1.0V" is provided at the VIN pin while maintaining a certain IOUT value).

(NOTE2) Vdif = { VIN1 ^(NOTE4) - VOUT1 ^(NOTE3) }

(NOTE3) VOUT1 = A voltage equal to 98% of the output voltage whenever an amply stabilized IOUT { VOUT(T) + 1.0V } is input.

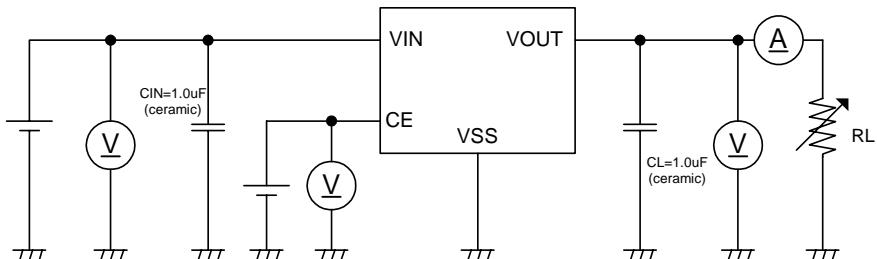

(NOTE4) VIN1 = The input voltage when VOUT1 appears as input voltage is gradually decreased.

(NOTE5) Unless otherwise stated, (VIN = VOUT(T) + 1.0V).
